

Expertise for Renewable Energy

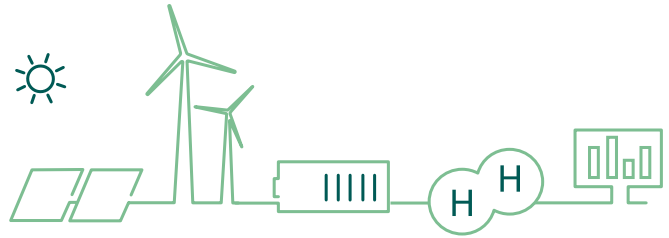

ABO Energy is your strong partner for the development and construction of wind and solar energy, battery storage and green hydrogen projects.

Comprehensive Know-How

Since 1996, ABO Energy has specialised in the development and construction of renewable energy projects. The company's in-house departments provide all steps of development and implementation: from site assessment, planning, engineering, and financing to construction, grid connection, and operational management.

Solar | Wind | Battery | Hydrogen | Operations & Maintenance

ABO Energy implements wind and solar farms as well as hybrid energy systems and green hydrogen projects.

A Trusted Partner for Your Project

1,200 employees

> 23 GW in
development

As a pioneer of renewable energies, our competent experts provide high-quality services and find creative solutions even for complex grid issues, construction challenges or regulatory restrictions. Banks, landowners, and communities appreciate our transparent and professional work.

Locally Embedded and Globally Linked

Internationally, ABO Energy is active in 16 countries on four continents. Our local teams in about 35 office locations worldwide are backed by our headquarters in Germany. With an annual project volume of around 500 million euros, ABO Energy is one of Europe's renowned renewable energy companies.

Renewables are our DNA
